

Largest valve and instrumentation inventory in Africa

AR CONTROLS, A leading importer and manufacturer of a comprehensive range of internationally-recognised valves and instrumentation, has the largest product inventory of any similar company in Africa. Director Julien van Niekerk comments, 'We carry a huge inventory. There is not another valve supplier on the continent with a similar stockholding.' This is largely since the company also specialises in stainless steel products for erosive and corrosive applications in a range of industries.

Apart from its extensive product range, AR Controls also offers a combination of technical expertise, aftermarket service, support, and regular site visits. It is this grouping of stockholding and infrastructure that has seen AR Controls enjoy rapid growth and expansion in recent years. 'We are positioned to capitalise on any opportunity, and aim to increase our market share and footprint significantly,' Van Niekerk states.
